London 7th July 1830

The Directors communicate their last report by stating the progress which at that time had been made in raising the additional capital authorized by the resolutions of the general meeting of 12th last. 1830 - and they now request further progress. The total amount received, has been as follows:

- 3236 1/25 shares at 25½ per share £81,911 0:0
- 138 10/25 clotehots at various prices £731 9:3

Total: £86,642 9:3

The number of additional shares for which have been created in trust of 4000 authorized by the above, was 3374 1/25.

The following is the present state of the Company's finances:

- Cash at the bankers £135,150
- Cash lent on Exchange Bills, India 2752 25
- Exchequer bills 4,600 of which 1,200
- 4,089 13 due London £200 13
- Exchequer bills lodged at the bankers as a security for £10,680
- Bullion arrived for £420
- Further remittance of Bullion to leave £2,000

£50,624 13

In 1829, the expenses alone of recruiting the army were £3,000. The income was £3,000. The income was expected to be drained by the monthly losses.
advances Mr. Willington & Capt. Lombard had set out on a journey to visit it - the result of that visit will be communicated to Poonah - Mr. Keppel's visit to remain is calculated to raise high hopes of the completion of these mines.

Real de Nortes - owing to the difference between the owners and the company being still unsettled the works have been limited to very small trials - the most considerable heights of Ranino on the Piccaninny Vein - shaft sunk to 477 feet was stopeoj on the 1st September.

Reforma - a small vein discovered with a widening daily, & at date of last advice the estimate of the works were in very small. The decision to be recent to having been considered over future in further.

The directors do not think it probable that proceeds will be contin. in this district until the prospects there considerably improve.

Harimonde

The following is a statement of the increase of the vein & room costs since the last report at 2d of June 1829. The increase of room & floor costs has been attended with considerable expense.

Mr. Hurry's report to the Board of Directors of 31st July 1830 by them laid before a Special Meeting of Proprietors on Wed 11th Aug 1830.

My first impression of the nature present that is discussed of the country is that they appear to be means commensurate with the magnitude of its features. The first impression is that extensive areas have been obtained at a greater depth with more caution & expenses might have been incurred, but I trust an issue at length arrived the position from costs we are now led to the future with provided hopes of reasonable permanent results. The mines are abundant in or with the at Wate... rich ore are yet worked to profit. The relative costs are now on a large scale & capable of making important returns even from one of moderate returns...

The existence of management abroad have been successfully while experience dear, I think needed it more efficiently. Such are my general views for the obvious hazard that the concerns of the country are in a state at present to look to equity stability in its present state & to increased probability of future success... success. It is evident grounds so rapidly that it is possible the next project or two may bring use of benefit of great benefit. The quantity of ore does not allow to be very good, must but then if such a burden on important extant to our returns we must look to produce rather than content to adding our minds to advantage with result. The education of officers of higher competition. They may be themselves that the effort of the mining will in a great degree for labor of these crews. Leaving as before, the greater part of what will be raised outside a...
all the old stone works, but under a view which may
the view from is readily a sketch but what it will
make the end - He was further to have the Baranoa
make, down into it reaches the wonder place of mining
work by reports are the richest.
This shaft has been selected for the two large hills the
hills, being formed of static in the country of
of mining, it will either enter, or, coming
close to 100 3 years all off, who have been working
above, and altho it will require a level from itself
to some length to the places above named of it will run
for the whole distance in the same and in its after
if where the water works has been taken away of
the out look. It is an encouraging circumstance
in this mine, that the works at the out look are
very extensive, and that the rubbish with which
the old workings were filled has for some time
remained and will probably long continue to furnish
produce to the minesmen generally equal to the
expenditure of the mine.

Sera Nicholastos el Cordero - a small trial mine
and the present out look is encouraging - the opening
large, and at its present shallow depth by no means
deficient in ones this of low quality - it seems or
I will decide whether to prosecute this venture
in a more extensive way - this being may
become one of great importance.

Maximas Degree de la Ley Chances. The vein in these
hills to this defective one, has the 100 very large
been devised about it - the depth of the adit does
not of much years - We are encouraged to proceed
more than is necessary to become in our rights
nothing but by resilience of working on the vein
contains no water, the reason of the present is
it will make the most convenient of easily worked
Real de Monte what you have said in your report

surprised nearly all that can be said of being the
information down to the April when I visited these
mines on my road to the coast. The one you mention
in Rosario had there been recently discovered a
small force was employed in efforts to allow of
seeking up of it - The water went down very badly
in 2 acres or 3 feet has been done on this end
a little of which was 7 or 8 inches under the
whole length of the adit, and was then yielding
according to the estimate, value of the ore a single
burdeens over the mines including the upwards
If this ore that extend in length of 3 feet it be
found not to have been worked underneath it
may be expected to furnish the amount of giving
then a fair trial by working it to the depth
The small size of the vein for our very
unusual state of the result of this laboring.

Real de Caborce - as you will to town
the report of the Wellington & Cabello is to
district, it is unnecessary for me to say more about
them to reflect the obvious formerly producing it
will be found worth more some thousand man
cattle been subdued after it.

Mines desolated & abandoned -
if these some may under suitable circumstances
write a future trial.

Mendoza Villafuerte & de Barneble are the only
mines, the debts above were can not be refused, as they are working by the usage
with a product of the same.

No avances.

Gramey does not furnish a sufficient number
of private reductions establishments to meet any
considerable requirements in the productions after
which consequence the Country want continually
to the sale of their ores at a very delinquency in,
or must enter more largely into the export of
which than was formerly done by the same countries.
This for a time will bear hard upon the finances of the country. But the benefit of reducing its taxes, and it has always been considered as an advantageous employment.

The Committee have effected great improvements, but so as not to clench the policy of saving, by the measures adopted for the reduction of the number of those unemployed, and the forces engaged in the work of the reduction of the taxes, is a matter of the utmost importance. And, if it were only produced a saving of 1½ per cent, it would add to the efficiency of each military body, and add to the funds it will give for the operation.

Such are my views of the present state of the country. In the present state of the country, we are in a situation where we can turn a moderate force, by a steady perseverance in our present system together with a cautious and limited attention to exterior objects, and to our means, prepare the way for the future extension of the republic.

Edward Henry.

of your advice to the 9th July inclusive to the Board, we have notice a few of the leading heads:—

1. For the estimate for the 9th, a solicitation to make the most satisfactory that has ever been made. Is there a prospect of the bills to be realized? The No, quite agree in this, and it seems that the funds were only to be provided for exego, so the country is very old, and to be provided for exego, so the country is very old.

2. As to the means to be taken in our dealings to secure your papers having to provide for the defray. You will receive a full statement. It is unnecessary to say that every bill will be paid in cash. We trust that the demands for the country is very old, and that every thing will be done to their satisfaction in conformity with the contract.

3. We are very satisfied to see the drawing system, and that we can rely on our dealings. At present, we are very pleased to see the effect of the system of the correspondence. It is apparent that the Board has sent a bill of very old, and that every thing will be done to their satisfaction in conformity with the contract.

The letter of the Board above referred to—London 14th, 1850.

Mr. James Charles F. Meares Mission—Committee—

We hereby authorize you to negotiate the drafts on the Board by the following order on the instructions of this Association for the sum of two thousand pounds. The draft is to be in words, as follows:—

The Board of Directors No. 8.

As you are aware, the Board was prepared. They are then by put into your possession.
This was the basis. Then the Barrows shaft offered on whole the greatest advantages for getting at the workings of the mine - this was a shaft. We might also have found the shaft one above the adit level. By any attempt of carrying it out one way it led by way of the workings. We believe the sluices under Rosa de Cortes to be the richest shaft of this area. The fault strikes through a fault. The fault is one where we are making a good difference of one. When we can get clear out of all concerns, we can stop the work. It is encouraging that the hard rock is at all. Rosario has running water, and there is no noticeable difference of one. If we can get clear out of all concerns, we can stop the work. It is encouraging that the hard rock is at all. Rosario has running water, and there is no noticeable difference of one.
There is a Petition — glad to see the State likely to be able to avoid this, the present state of our finances is such that the compromise will have to be enforced. It may be well to get some suggestions for work, but otherwise getting rid of £60,000 or £60,000, would be an object of some consideration on the part of the Government. We are on the point of returning to the conditions of 1837, when the State was plunged into the national debt. The proposal is not likely to be successful in its present form. I consider this document of a new testament and the idea of giving in consideration absolutely disastrous. We reason following for —

In consequence, the whole art is a declaration of the belief in the right of the Government to carry out their own purposes. What we have to do is to consider the relative position of the Government and the public. The public has a right to the country and the Government has a right to do what it pleases. The proposal is not likely to be successful in its present form. We reason following for —

Dear Sir,

I am writing to you to inform you that my uncle has arrived in Paris on the 28th of last month by the steamer yesterday morning. He has brought me a letter from him that he will be here in good time for you.

In the event of your arrival in the country or in any other place, I shall be most happy to see you. Please give me a note as to what I am to do, and I will be happy to assist you in any way possible.

Your sincerely,
